

PERMA COLOUR FLEXIBLE CRACK FILLER

TECHNICAL DATA SHEET

PRODUCT CODE: FCF 10

PHYSICAL DESCRIPTION: AN OFF WHITE POWDER TO BE MIXED WITH CLEAN WATER TO FILL PREPARED CRACKS IN CONCRETE BEFORE FLO-CRETE CONCRETE TOPPING IS APPLIED.

INGREDIENTS: FLEXIBLE POLYMERS
MOISTURE REPELLENT
WHITE CEMENT
SAND
FINEST CHALK
STEARATES
DEFOAMER

FEATURES: GOOD WATER RESISTANCE
EXCELLENT FLEXIBILITY

NOTE: Before starting crack treatment, you should assess the existing concrete and substrates, to satisfy yourself and your client that any cracks that are apparent are not unduly affected by moisture or movement. This crack filler is not a cure for cracking, but a flexible water resistant filler for cracked concrete, to which the Flo-Crete concrete topping will bond itself to preventing delamination of the Flo-Crete topping over active crack's. Because of Perma Colour flexible crack fillers combined attributes of being flexible and its compatibility with Flo-Crete, the worst scenario after filling cracks is the appearance of a fine hairline crack.

Perma-Colour flexible crack filler is suitable for horizontal and vertical applications.
